Accessible Pedestrian Signal Request

The City of Boulder will consider the installation of accessible pedestrian signals (APS) to provide crossing assistance at signalized intersections, but only where needed. APS requests will be assessed based on need, prioritize with the other warranted locations, and addressed as funding and resources allow.

1. The intersection must already be signalized.
2. There must be a demonstrated need for an APS. The need is demonstrated through this user request.

Traffic Engineering will evaluate these requests considering the safety and effectiveness of the crossing for pedestrians in general, as well as the information needs of pedestrians with visual disabilities. A number of factors may be reviewed in determining whether or not to install an audible signal, including, but not limited to, traffic volumes (including turning traffic); proximity to key destinations; intersection complexity; traffic signal phasing; and frequency of use of the crossing by people with visual disabilities.

Please provide the following information if you would like to request an audible pedestrian signal:

Requestor's Name _____
Address _____
Phone _____
E-Mail _____

Location
(intersection street names) _____ and _____

Audible signal requested for crossing which street(s) and which legs (or sides)

Reason for request

Please describe your use of this crossing, including frequency of use (number of times per day, week, month). For example, cross at this location to access bus stop, regular route to work or shopping, etc. Include any information that might help us in evaluating your request.
