Go from document to digital with the Snap Smart Stand by Pro Money Image. This simple, easy, and accessible solution will take the hassle out of home banking, expense tracking, payment recording, or document scanning. Following are the simple directions of use:

Place the phone with the camera lens facing down on top of the device. Make sure the lens and flash are unobstructed and have a clear view of the inside, through the top opening.

Position a credit card, check or document on the removable tray. Make sure the document is facing up.

Place the tray with the document face up inside the device. Make sure the tray is well centered at the bottom of the device.

Ensure that the document is framed well and take the picture. The Text to Speech app will translate so you can hear the contents of the document.
