Math You Touch Workshop

Hosted by the National Federation of the Blind (NFB) of New Mexico Parents of Blind Children

Workshop Description

Understanding basic math concepts is crucial for ongoing success. These basics are often taught visually, so blind students and their parents often experience confusion and frustration.

You are invited to learn fun and practical ways to reinforce basic math for your blind student. We will take it off the smart board and make it hands-on. Activities at this workshop will help clear confusion and reduce frustration.

Real-life opportunities and readily available materials will be the focus. Teachers, parents, and basic math learners will benefit from this session.

Event Details
