

Please use this quick survey to provide comments on the **two potential bus service concepts** being presented at this meeting. Don't forget to also take our MetroQuest survey online at [atv.metroquest.com](http://atv.metroquest.com).

### Concept 1: Coverage

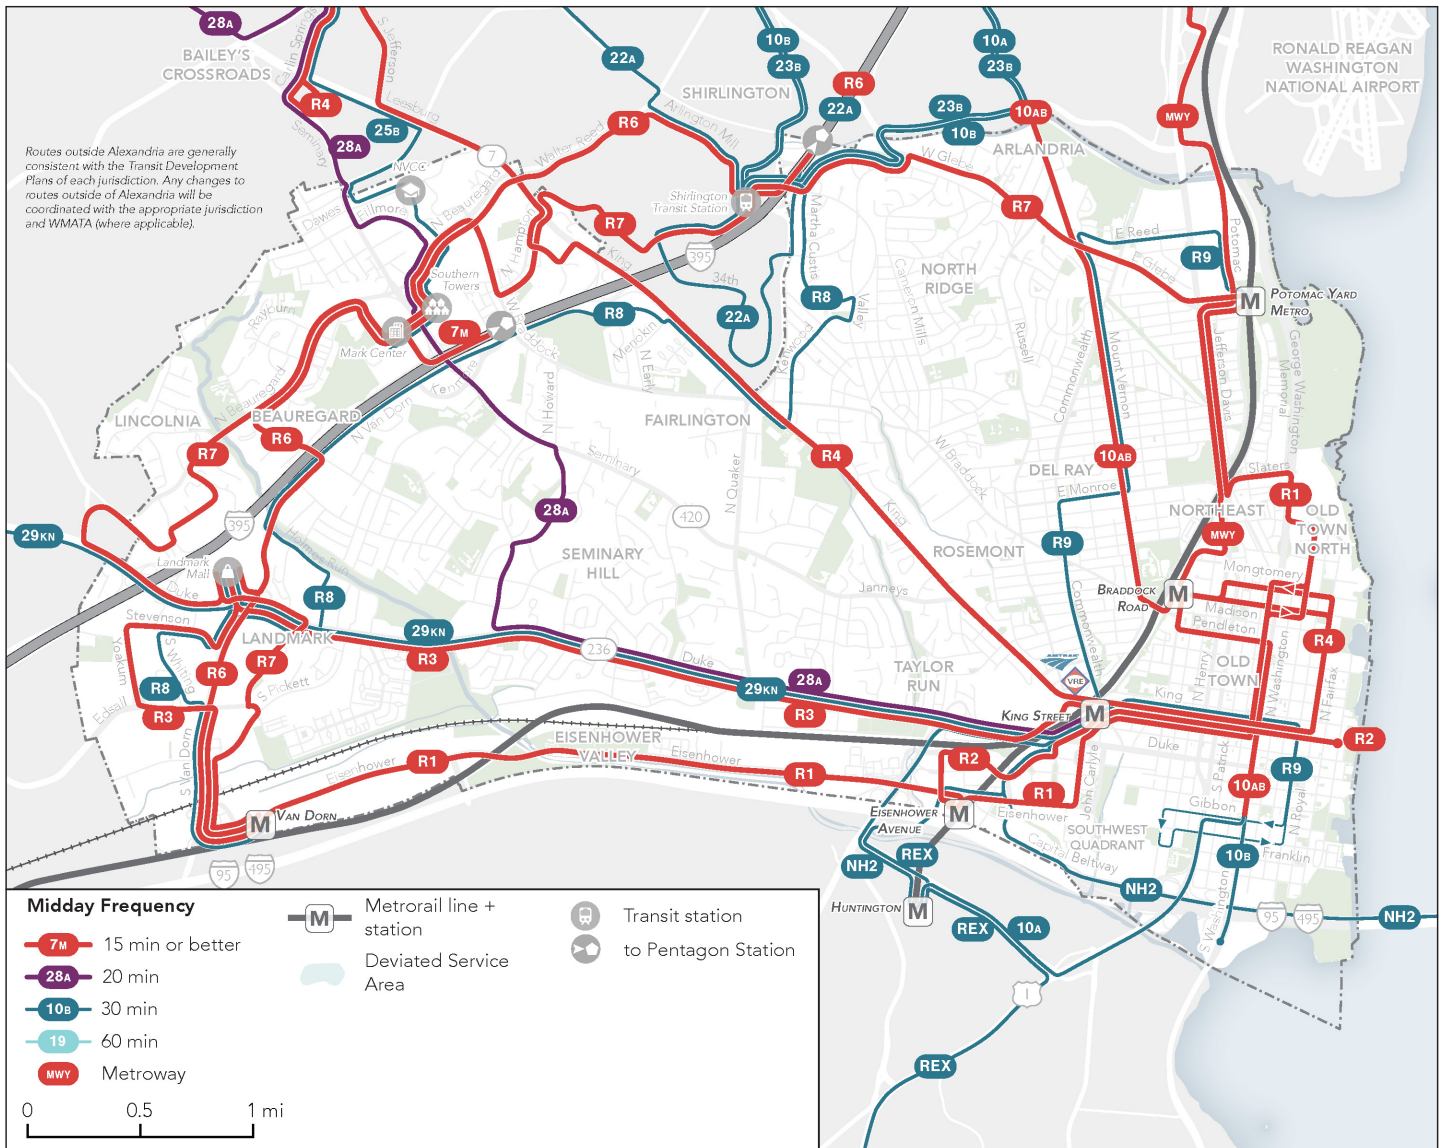

- Most areas with a route nearby today would have a route nearby in this concept
- This design reduces walking distance, and the number of transfers that riders might have to make
- Five frequent, all-day routes that offer radial service from Old Town
- Orbital route that runs on the west to northwest side of Alexandria

**NOTE ABOUT WEEKDAY PEAK SERVICE:** This map only shows the midday frequency of routes that operate all day. Additional peak-only routes are part of this concept and can be seen on the Peak Services map on the Concept Development Board.

## Concept 2: Ridership

- Service is concentrated into fewer routes focused on the areas where the most people live, work, and study
- This concept has six frequent, all-day routes that offer radial service from Old Town
- Two frequent orbital routes that run on the west to northwest side of Alexandria
- Concept does not provide all day service from in some lower density areas of the City

## Quick Survey

Feedback received on the draft concepts will help the team develop the final network. Review the display boards including the summary of concept performance. **Please rate each of the networks by filling in or circling the amount of stars, five being the highest rating. Please note any additional supporting comments related to the concept in the space below.**
